

Connecting to the Neo-Sentry Telegram Bot

To receive real-time incubator alerts and monitor system data directly on your phone, you need to connect your personal Telegram account to the system. Follow these four quick steps:

Step 1: Open the Bot Link

Click this direct link or search for the exact username inside your Telegram app: 👉

[@Incubator_neoSentry_bot](https://t.me/Incubator_neoSentry_bot)

Step 2: Activate the Bot

Press the **Start** button at the bottom of the chat window. This registers your account with our bot so it has permission to message you.

Step 3: Retrieve Your Personal Chat ID

Because the bot needs to know exactly *where* to send the alerts, you need to grab your unique Telegram numerical ID:

1. Search for **@userinfobot** in Telegram and press **Start**.
2. It will instantly reply with your profile details.
3. Copy the string of numbers labeled **Id**.

Step 4: Update the Code Configuration

Open your Neo-Sentry ESP32 platform, locate the configuration section at the top, and paste your copied ID into the target variable:

```
# ===== CONFIGURATION ZONE =====  
  
#define CHAT_ID " PASTE_YOUR_COPIED_ID_HERE "  
  
# =====
```

⚠️ **Important Troubleshooting Note:** Telegram bots are strictly forbidden from initiating conversations with users for privacy reasons. If you skip **Step 2** and do not press **Start** on **@Incubator_neoSentry_bot**, the firmware will throw a delivery error and your hardware will fail to send you any critical incubator alerts!

Monitoring Live Data on ThingSpeak

The Neo-Sentry system publishes its real-time sensor metrics directly to a public cloud dashboard. You do not need a ThingSpeak account or any login credentials to watch the live data streams.

How to Access the Live Dashboard:

1. Simply click on the official project dashboard link:

👉 <https://thingspeak.mathworks.com/channels/3388454>

2. The page will load the public charts automatically.

Live Google Sheets Data Log

All historical data points, sensor metrics, and operational timestamps generated by the Neo-Sentry 1.0 system are recorded continuously into a cloud database.

You can watch the logs populate row-by-row in real-time by accessing the public spreadsheet link below (**copy-paste url in case it does not open**): 👉

<https://docs.google.com/spreadsheets/d/1CYqXfj2ydENCGktqIENCoc1UpGHSjCNpTQpsZO7Fu88/edit?gid=0#gid=0>

Note: The document is set to read-only format for public safety, but updates will refresh dynamically on your screen whenever the active monitoring script executes a write operation.
